

Écriture de drivers pour les OS embarqués et temps réel

L'écriture de drivers (ou pilotes de périphériques) est une activité très importante, et souvent critique, en environnement embarqué.

Nous proposons des cours adaptés aux spécificités du développement de drivers en environnement embarqué, avec des exercices utilisant, chaque fois que nécessaire, des environnements de développement croisés et des cartes cibles industrielles.

D3 Linux Drivers. This course covers the various techniques needed to write Linux (2.6 and 3.x) drivers, bus management (PCI, ...) not-plug and auto-configuration of devices as well as the specific problems due to multi-core and advanced processors. **4 days inquiry**

D7 Power Management in Linux Drivers. This course dives into the concepts of Linux drivers' interaction with power management features of the Linux kernel. This 2-days management architecture to write USB Host (Client) drivers, as well as gadget drivers, the USB, HID and power management architecture to write Linux on an embedded system is a complex yet often difficult task. **2 days inquiry**

Ac6 System Workbench for Linux. Installing Linux on an embedded system is a complex yet often difficult task. Ac6 System Workbench was designed to make things easier and to be easily extended. This training presents you the architecture of Ac6 System Workbench and how to parameterize it to fit your needs. **1 day inquiry**
