## Porting, tailoring and programming Google's Android OS

The Android operating system, developped by Google and based on the Linux kernel, is used more and more frequently not only on smartphones but also for dedicated embedded devices, notably in the "Machine to Machine" market.

**ac6-training** proposes trainings on the porting of the operating system on your board and its tailoring to your specific needs, as well as creating embedded applications running on the Android system in the praticipation of the applications running on the Android system in the praticipation of the applications running on the Android system in the praticipation of the Android system in the praticipation of the applications running on the Android system in the praticipation of the application of the Android system in the praticipation of the praticipation of the praticipation of the Android system in the praticipation of the Android system in the praticipation of the praticipat
