Communication

Processors are only part of the landscape of embedded systems; these must communicate with the outer world and need to be interconnected with other devices in the system. Ac6 provides trainings on all the most advanced communication and interconnection technologies.

You can see detailed course category descriptions by using the carrousel on top. You can also click on category definitions in the briefs hereafter.

Connectivity - Courses on digital interconnect technologies ACSYS offers a large set of courses on connectivity technologies.
Each course details a particular standard, such as PCI Express or RapidIO.

Network - Courses on Ethernet and switches ACSYS offers a large set of courses on Ethernet networks.
It includes both courses on Ethernet and switching standards (IEEE802.3).

Storage - Storage Interfaces
